The XML Source task pane on the right shows the following structure:

- data-set_Map
 - data-set
 - record
 - LastName
 - Sales
 - Country
 - Quarter

Instructions in the task pane:

To map repeating elements, drag the elements from the tree onto the worksheet where you want the data headings to appear.

To import XML data, right click an XML mapped cell, point to XML, and then click Import.

Folks, I understand this is a really touchy subject, but the reality is that there is absolutely no evidence that any GW is on the horizon. The data provided by the SLS shows that it will either not meet its initial launch date or that it will be launched with a significant technical issue that will prevent it from launching at all. And to all of you who are looking at some type of HRSV upgrade, that ship has sailed. It's not coming. We are still stuck with the current chemical launch vehicle. If you want to discuss this further, please feel free to make your comments below. However, I will be deleting all comments made to this post that mention the HRSV. Additional Information About the SLS You may also want to know how the SLS got to where it is. There are 3 ways the SLS was built:

1. Field of the Invention The present invention relates to a control apparatus and a control method for an internal combustion engine in which an electronic control unit executes an ignition control according to an operating condition of the engine.
2. Description of the Related Art A conventional ignition control apparatus for an internal combustion engine is provided with an ECU and an ignition controller. The ECU calculates a basic waveform of an ignition waveform to be output to a spark plug of the engine from the ECU and calculates a correction amount for the ignition waveform on the basis of an operating condition of the engine, the correction amount being used for correcting a basic waveform of a high-side voltage that is supplied to the ignition controller from the ECU. The ECU calculates the basic waveform of the ignition waveform according to the operating condition of the engine and calculates the correction amount, on
